

MAAA FLIGHT PROFICIENCY SCHEME
FLIGHT REQUIREMENTS & TEST CHECK SHEET

HELICOPTER – BRONZE & SILVER WINGS

This Test is to be assessed by an MAAA Instructor. Tick either: Bronze Silver

The requirements specified have been determined by the MAAA and are not to be varied.

Bronze or Silver Wings (Helicopter) are awarded when a member demonstrates, in the course of one session that he/she has the skills to perform the listed manoeuvres, detailed in the diagrams provided, in a safe, confident and competent manner.

This is to certify that AUS

of P/Code

Club **Note address below if wings to be sent to Club**

has demonstrated the degree of proficiency in radio controlled flying of model aircraft in accordance with MOP027 to be awarded the MAAA Bronze or Silver Wings (Helicopter).

.....
 Signature MAAA Instructor's Name (BLOCK LETTERS) AUS No. Date

At the successful completion of the test, this form shall be completed by the Instructor and sent to the **State Association.**

Note: Wings will be sent to Pilot unless Club address is noted below.

Manoeuvres		Flight
1	Pre-flight Training (must be completed prior to flying) Dexterity of the pilot with his equipment Theoretical knowledge Pre-flight checks including arming electric motors if appropriate and radio range checks	
2	Lift off to eye-level height, hover for ten seconds and land.	
3	Lift off to skid eye level height, briefly hover, followed by a straight outward flight of 10 metres, briefly hover, then return tail first in straight flight, briefly hover and land.	
4	Lift off to skid eye level height and stop. Model turns 90 degrees left or right, then without pausing, turns through 180 degrees (tail towards pilot), then without pausing turns 90 degrees back to tail-in to the pilot, pauses then lands.	
5	Lift off to eye level, briefly hover, then execute a vertical rectangle, 5m high and 10m wide, returning to the point above the start point, briefly hover and land.	
6	Lift off to eye level, briefly hover, then turn and fly smoothly left or right at a constant height a distance of approximately 10m, then without stopping, bank and turn away from the pilot and fly back past the centre point continuing approximately a further 10m on the opposite side before banking and turning away from the pilot and fly back past the centre point. Return to the heli pad, briefly hover and land. The tail should follow behind the model along the flight path.	
7	Hover the model to a position approximately 10m above ground and 10m directly to the side (downwind) of the landing position (Central Heli pad). Perform a 45 degree descent to the landing position where the model hovers briefly and lands.	

Manoeuvres are to be executed with the pilot standing a minimum distance of 10 metres behind the Central Heli pad, using a flight line layout with one flag or marker located 5 metres to each side of the Central Heli pad. All manoeuvres are flown tail toward the pilot except where specified.

Wings to be sent to Pilot? YES / NO (If NO, note address below)
 Strike out as applicable
